

CLIENT | Mayflower Trust
PROJECT | Mayflower Theatre
LOCATION | Southampton
DURATION | 10 Nights

Project Particulars:

Alltask were commissioned by the Mayflower trust to carry out a full decontamination and encapsulation of the plenum air ventilation chamber at their 1928 grade II listed theatre in Southampton.

The theatre was to remain open at all times so a comprehensive schedule of works was put in place and to combat noise pollution an acoustic box was built over the negative pressure units.

Alltask's confined space trained asbestos removal operatives then undertook a full decontamination of the chamber within a negative pressure enclosure.

Once decontamination was complete all surfaces were then encapsulated with a curing membrane.

All works were complete with no interruption to rehearsals or performances.

ASBESTOS REMOVAL

Alltasks fully trained team are able to advise you on all your asbestos issues. We hold a three year licence to remove asbestos and are members of ACAD. With our scaffolding and encapsulation all being delivered in-house we are able to provide a turn-key solution in complex high risk environments for our clients under The Control of Asbestos Regulations 2012.

We undertake:

- The removal of contaminated soil from industrial sites for brownfield development.
- The removal of asbestos from industrial buildings including pipework and boilers in advance of demolition.
- The removal of asbestos from highly regulated sites including rail, power, highways, factories and chemical plants.
- Watching brief on potentially contaminated land prior to excavation.
- The removal and disposal of asbestos cement roof sheeting.
- On-site surveying and continual environmental monitoring.
- 24hr emergency call out
- Environmental clean-ups.
